

## Cleaning Supplies

- **Glass Cleaner:** A glass cleaner is a liquid solution specifically designed to effectively clean and remove dirt, grime, and streaks from glass surfaces.
- **Floor Cleaner:** A floor cleaner is a product used to clean and disinfect floors, typically in the form of a liquid or powder.
- **Stain Remover:** A stain remover is a cleaning product designed to eliminate tough stains from various surfaces such as fabrics, carpets, and upholstery.
- **All-purpose Cleaner:** An all-purpose cleaner is a versatile cleaning product designed to effectively clean various surfaces and household items.
- **Sanitizer:** A sanitizer is a cleaning product that helps to kill germs and bacteria on surfaces to prevent the spread of illnesses.
- **Bleach:** Bleach is a strong chemical cleaner often used to disinfect and whiten surfaces, commonly used in laundry and cleaning.
- **Disinfectant:** A disinfectant is a cleaning agent that kills germs and bacteria on surfaces to prevent the spread of illness.
- **Detergent:** Detergent is a cleaning agent that removes dirt, grease, and stains from surfaces, typically used for laundry and dishwashing.

## Cleaning Techniques

- **Mop:** A mop is a cleaning tool consisting of a long handle with a bundle of absorbent material attached to it.
- **Dust:** Dust refers to fine, dry particles of dirt, skin cells, and other debris that accumulate on surfaces and need to be removed during cleaning.
- **Degrease:** Degrease means to remove grease or oil from a surface using cleaning agents or solvents to make it clean.
- **Wipe:** To wipe means to clean a surface by rubbing it with a cloth or sponge, usually with a cleaning solution.
- **Scrub:** Scrubbing involves vigorously cleaning a surface using a brush or abrasive tool to remove dirt, grime, and stains.
- **Disinfect:** Disinfecting is the process of killing germs and bacteria on surfaces to prevent the spread of harmful pathogens.
- **Sanitize:** Sanitize refers to the process of cleaning and disinfecting surfaces to remove germs, bacteria, and other microorganisms, ensuring cleanliness.

## Dusting

- Allergies: Allergies in the context of dusting refer to physical reactions such as sneezing or itching caused by dust particles.
- Dust Cloth: A dust cloth is a cloth or rag used to remove dust from surfaces while cleaning and dusting around the house.
- Furniture Polish: Furniture polish is a cleaning product used to remove dust, dirt, and grime from furniture surfaces, leaving a shiny finish.

## Sweeping

- Broom: A broom is a long-handled cleaning tool with stiff bristles used to sweep dirt and debris off floors and surfaces.
- Dustpan: A dustpan is a flat scoop with a handle used to collect and dispose of dust and debris while sweeping.
- Sweep: Sweeping refers to the act of using a broom to collect dirt, dust, and debris from floors and surfaces.
- Dust Bunnies: Dust bunnies are small clumps of dust, hair, and other debris that accumulate on floors and under furniture.
- Debris: Debris refers to small pieces of dirt, dust, and other particles that accumulate on the floor and need to be swept away.

## Mopping

- Squeeze: To squeeze refers to wringing out excess water from a mop before using it to clean surfaces in the house.
- Mop: A mop is a cleaning tool consisting of a handle and absorbent material, used for wiping and scrubbing floors.
- Mop Bucket: A mop bucket is a container used to hold water and cleaning solution for mopping floors, typically equipped with a wringer.
- Squeegee: A squeegee is a tool with a rubber blade used to remove excess water or cleaning solution while mopping floors.
- Swab: A swab is a mop head or attachment used for cleaning floors by absorbing liquid and dirt from the surface.

## Scrubbing

- **Rag:** A rag is a piece of cloth used for cleaning surfaces by scrubbing or wiping away dirt, dust, and grime.
- **Scrub Brush:** A scrub brush is a cleaning tool with stiff bristles used to scrub surfaces and remove dirt, grime, and stains.
- **Sponge:** A sponge is a porous cleaning tool used for scrubbing surfaces, typically made of soft material like cellulose or foam.
- **Disinfectant:** A disinfectant is a cleaning product that is specifically designed to kill germs, bacteria, and viruses on surfaces.

## **Organizing**

- **Streamline:** Streamline in organizing refers to simplifying and optimizing processes to make them more efficient, decluttering and creating a more functional space.
- **Tidy:** Tidy refers to keeping things neat and organized in a clean and orderly manner, creating a clutter-free and visually appealing space.
- **Label:** Labels are small tags or stickers attached to items to categorize and identify them, aiding in organizing and cleaning the house.
- **Categorize:** To categorize in the context of organizing is to group items or belongings into specific categories for easier identification and organization.
- **Arrange:** To put items in a specific order or position to create a tidy and organized space within the home.
- **Sort:** To arrange items into categories or groups based on similarities to make it easier to find and organize belongings.
- **Declutter:** Declutter means to remove unnecessary items or belongings from a space in order to organize and create a more orderly environment.
