

Washing

- **Delicate Cycle:** A gentle washing setting on a washing machine designed for delicate fabrics that require special care during the laundry process.
- **Detergent:** Detergent is a cleaning agent used in washing laundry to remove dirt, stains, and odors from clothing and linens.
- **Fabric Softener:** Fabric softener is a liquid added to laundry during washing to make clothes feel softer, reduce static, and impart a pleasant scent.
- **Spin Cycle:** Spin cycle is a phase in the washing machine cycle where the drum spins rapidly to remove excess water from clothes.
- **Spin Cycle:** Spin cycle is the final stage in a washing machine where the drum spins rapidly to remove excess water from the clothes.
- **Washing Machine:** A washing machine is a household appliance used to clean clothes by agitating them in a mixture of water and detergent.
- **Laundry:** Laundry refers to the process of washing and cleaning clothes, linens, and other fabrics using water and detergent.

Drying

- **Dryer:** A dryer is a household appliance used to remove moisture from clothing and other fabrics after they have been washed.
- **Clothesline:** A clothesline is a piece of rope or wire stretched between two points outdoors, used for hanging wet laundry to dry.
- **Air-drying:** Air-drying is the process of allowing wet laundry to dry naturally by hanging it outside or indoors without using a dryer.
- **Lint Trap:** A lint trap is a filter located in a dryer that collects lint and prevents it from clogging the machine.
- **Clothespin:** A clothespin is a small, spring-loaded clip used to hang clothing on a clothesline for air drying after washing.
- **Drying Rack:** A drying rack is a portable device used to hang clothes to air dry after washing, typically constructed of metal or plastic.
- **Wrinkle-free:** Wrinkle-free drying refers to a process of drying clothes in a way that minimizes or eliminates wrinkles on the fabric.

Folding

- **Crease:** A crease is a line or ridge formed on fabric when it is folded or wrinkled, usually requiring ironing to remove.
- **Clothes Hangers:** Clothes hangers are used to hang clothing items to dry or store, typically made of plastic, wood, or metal.
- **Stack Of Clothes:** A pile of clean clothes that have been neatly folded and stacked on top of each other for organization.
- **Fold:** In the context of doing laundry, folding refers to the act of neatly creasing and arranging clothing or linens.

Ironing

- **Pressing:** Pressing in ironing refers to using a hot iron to smooth out wrinkles and creases in clothing or fabric.
- **Wrinkles:** Wrinkles are creases or folds in fabric that occur during washing or drying and need to be removed by ironing.
- **Steam:** Steam in ironing is the process of using hot water vapor to remove wrinkles and creases from clothing.
- **Iron:** Ironing is the process of using a heated iron to remove wrinkles and creases from clothing or fabric.
- **Ironing Board:** An ironing board is a flat, padded surface used for ironing clothes to remove wrinkles and create a smooth finish.

Stain removal

- **Stain:** A stain is a discoloration on fabric caused by a spill or dirt that needs to be removed during laundry.
- **Spot:** A spot refers to a localized area of a stain on fabric that requires targeted treatment for effective removal.
- **Bleach:** Bleach is a chemical agent used to remove stains and brighten fabrics by breaking down color molecules in laundry.
- **Fabric:** Fabric refers to the material from which clothing or linens are made, which can vary in texture, thickness, and composition.
- **Stain Removal:** Stain removal is the process of eliminating unwanted marks or discoloration from fabric during the laundering process.
